Frequently Asked Questions
Accelerating the development of new diagnostics for TB: rapid detection tests for TB
(third-generation LAM tests)

(Last updated: 13 September 2022)

1. Where can I find the link to register for the webinar and how can I access the recording after the webinar?

The link to register for the webinar session is available on the FIND ‘Call for Partners’ webpage, just under the RFP link. The recording will be made available at the same location after the webinar.

2. What is the funding range for each awardee under the DriveDx4TB project?

There will be no direct funding awards provided to applicants through the DriveDx4TB project. The budget envelope of US$ 15.9M will be used by FIND to fund activities that will indirectly support successful applicants in developing evidence dossiers for submission to the WHO GTB and ERPD and preparing for in-country implementation in LMICs. The specific supported activities are described in the RFP document under the section OBJECTIVES AND SCOPE.

3. Are aerosol-based technologies in scope of the current RFP?

We do not consider aerosol-based technologies to be in scope of the current RFP, as we are not currently able to support TB aerosol product development with the provision of appropriate sample panels as required for the assessment of technology performance claims prior to clinical studies. We continue to follow the work in the TB aerosol space and potential opportunities, although not in the scope of this RFP.

4. Can organizations apply as a consortium?

Yes, partnerships / consortium are accepted but a single lead entity shall be designated and shall assume responsibility for the application and for contract negotiations with FIND. Please refer to the section FUNDING AWARDS in the RFP document for more information.

5. Is it possible to submit more than one proposal?

A maximum of one proposal can be submitted per organization.
